

VIBHATH T K

Information Technology Engineer & Systems Innovator

vibhathcross@gmail.com | +91 8593891820 | [LinkedIn Profile](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Detail-oriented Information Technology engineering student with a robust foundation in low-level systems, data science, and modern application development. An expert in AI-augmented software engineering, adept at rapid prototyping, OS-level automation, and building complex full-stack applications by combining algorithmic logic with advanced generative AI orchestration. Proven track record of identifying real-world operational bottlenecks and engineering elegant, user-centric software solutions.

EDUCATION

B.Tech in Information Technology

Government Engineering College,
Idukki

Expected Graduation: 2028

TECHNICAL SKILLS

- **Languages:**
Basic Python, C, and HTML
- **Core CS Foundations:**
Data Structures & Algorithms, Operating Systems, Computer Networking
- **Specialties:**
OS Automation, UI/UX Design, Data Science, Full-Stack App Development
- **Methodologies:**
AI-Augmented Development (UI/UX & App Dev), AI-Assisted Rapid Prototyping, Prompt Engineering

CERTIFICATIONS

- **Foundations of Cybersecurity**
Google (via Coursera)
→ [View Verification](#)
- **30-Day Data Analytics Master-Class**
NoviTech R&D
→ [View Verification](#)
- **Digital 101 Program**
NASSCOM & MeitY
→ [View Verification](#)

FEATURED PROJECTS

AeroStream

Creator & Developer

- Engineered a premium desktop media companion for ad-free YouTube search, video playback, and offline downloads utilizing Electron, React, and Vite.
- Intercepted CORS constraints, seamlessly integrating yt-dlp and ffmpeg for automated stream extraction and local transcoding.
- [View AeroStream Repository](#)

Aether Carbon Unified Sync Matrix

Lead Developer

- Designed and engineered this specialized synchronization application exclusively for the Prompt Wars hackathon hosted by Hack2skill and Google.
- [View Aether Carbon Project](#)

Jasmin AI Assistant & OS Automation

Lead Architect & Developer

- Designed a hybrid local/cloud AI assistant ecosystem with an advanced React UI and native OS controls for automated system operations.
- Built "MTM" for deep progress analytics and integrated background yt-dlp servers for headless audio streaming.
- [View Jasmin-AI Repository](#)

VidZone Video Editor

Creator & Developer

- Deployed a bespoke desktop video editing utility optimized to streamline content creation workflows for YouTube, automating rendering tasks.
- [View VidZone Repository](#)

Thripura Press Digital Platform

Full Stack Developer

- Engineered a highly functional business website, utilizing AI-augmented development methodologies to drive clean UI/UX paradigms, digitalize operations, and manage client inquiries.
- [View Thripura Press Platform](#)

Personal Interactive Portfolio

Frontend Developer

- Leveraged AI-driven development for rapid UI/UX design and frontend implementation to build a dynamic, responsive single-page web portfolio showcasing ongoing software architectures.
